

eSAFE™ Sexual Assault Kit Integration Tracking System

Connecting the Dots to Improve Prosecution

Primary Marking Systems' eSAFE™ solution is a centralized database repository that works with mobile devices such as Zebra's advanced mobile technology to connect all important evidentiary components, improve documentation of the chain of custody, and lessen the trauma for survivors.

Nationally, there have been reports of as many as 400,000 sexual assault kits going untested. This demonstrates just how difficult it is for state leaders to manage and track sexual assault kits and related evidentiary components, not to mention the added complexity of DNA evidence tracking. The eSAFE™ solution gives stakeholders constant access to the information needed to assure security and report on progress through the system.

Primary Marking's 22 years of tracking experience means you can have peace of mind.

Assure complete visibility: eSAFE™ allows you to have full tracking of the status of sexual assault kits in an investigation. It easily integrates with the systems that police, prosecutors, healthcare providers, crime labs, and advocates are using now. Making kits traceable helps with compliance, makes auditing easy and prevents tampering.

Eliminate security risks: eSAFE™ exceeds Federal Information Processing Standards. Data exchanges in eSAFE™ are fully encrypted, secure, and aggregated. Each user is given selected authorizations, rights, or privileges, so sensitive information will only be viewed by those for whom it is intended.

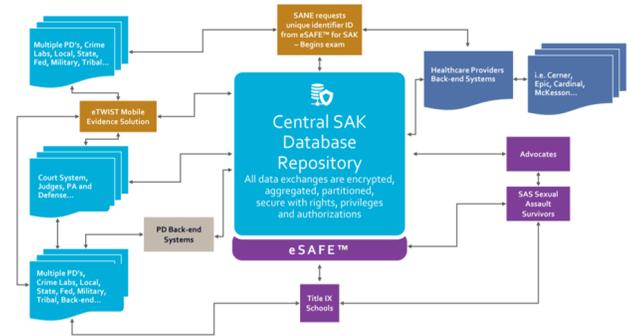

Increase survivor confidence: With such a low percentage of past sexual assault cases resulting in a conviction, survivors are often skeptical of the system. With eSAFE™ survivors can follow the process, feel more control, and have confidence that what they survived might produce evidence that is valuable and will help protect someone else.

Good Tracking Means Better Inter-Agency Communication

Using eSAFE™ makes it easy for law enforcement, prosecutors, court administrators, healthcare providers, survivors, and advocates to share information about a sexual assault kit and all its related components.

When an exam occurs, a nurse can use a Zebra handheld computer or tablet and a mobile printer to create a unique ID that the survivor can use to track the kit throughout the entire process. With this ID, evidence from the kit, a clothing bag, and a blood sample sent to separate lab can be easily connected in the courtroom

Authorized parties can review any part of the testing process, ensure test have been completed, and create audit reports to identify a piece of evidence at risk of missing submission deadlines.

Primary Marking Systems and Zebra Technologies bring unparalleled experience in asset tracking. The eSAFE™ system is designed to help you have more successful prosecutions and instill confidence in the survivor. Call us today to learn a better way to track.

- All stakeholders are consulted when setting up the system
- All related evidence can be tagged and reconnected
- No overlap of numbering between jurisdictions
- Secure voice identification and blockchain protection
- Timely reminder alerts, easy reporting and auditing functions

Offer survivors the gold standard. Our multiple patents and 22 years of tracking expertise will assure victims and their advocates that you care. With eSAFE™ you can rest easy knowing things are done right. Call us today for more information.
